

Fittings

Invisible hinges

Fitting equipment

- Microventilation
- Anti-burglary mushroom head locking devices
- 2 anti-burglary catches in every RU sash
- Handle rotation blockade with sliding

When the sash is closed the hinges are invisible what gives the windows exceptionally elegant appearance and facilitates keeping the windows clean. A great advantage of the fittings is an easy regulation without using the tools.

Fittings

Tilt first fitting

Fitting equipment

- Microventilation
- Anti-burglary mushroom head locking devices
- Anti-burglary catch in every RU sash
- Possibility to increase the number of catches
- Handle rotation blockade with sliding

The handle set horizontally tilts the window; full opening requires the handle to be set vertically. In connection with the TBT handle it allows the possibility to open the sash to be limited. Without the key it can be only tilted what eliminates the risk of falling out.
