

## Opening sensors

Sensors integrated with the fitting transmit information on window closing or opening to selected systems, activating them according to the user's expectations.

### Opening sensors Air-conditioning

## Energy saving

Window opening causes automatic deactivation of the air-conditioners and gives savings resulting from limiting inefficient air-conditioning operation.

## Opening sensors

### Heating

## Savings

Sash opening causes deactivation of the heater under the window. Therefore, the costs of inefficient heating can be avoided.

## Opening sensors

### Alarm system

## Security

Information on the window status is transmitted to the alarm system, activating an alarm, if needed.

- Three-function sensors distinguish the closed, tilted and opened window so the alarm system can be protected during ventilation.
- Sensors do not react to movement what makes that they can be active when residents and animals are at home.
- Sensors are invisible from outside therefore the burglars cannot prepare themselves for attempting to disarm them.
